INT-CL (IPC): G07G 1/06

## ABSTRACT:

PURPOSE: To save labor by transferring a conversion code and a conversion data to an artwork printer side by a communicating means.

CONSTITUTION: An access means 4 automatically converts the purchasing time point information of a storing means 1 to a code data format, which can be analyzed by the artwork printer, by a format conversion table 2. Then, a writing means 7 writes the code data in the converted format to another storing medium 6 so as to set the data to the artwork printer 5 or the code data is directly transferred to the artwork printer 5 by a communicating means 8. Thus, labor can be sharply saved by processing the purchasing time point information by the artwork printer 5 without manually inputting the information.
